                                                                         Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for generating altered or improved delta-endotoxin or delta-endotoxin. The production of containing the production of palants organisms are useful for generating altered or improved delta-endotoxin or delta-endotoxin or presence of delta-endotoxin or delta-endotoxin.

The presence of delta-endotoxin or delta-e
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   237

                                                                                                                                                                                                                    ठ
                                                                                                                                                                                                                                                                                                                                            ठ
                                                                                                                                                                                                                                                                                   This sequence represents a delta-endotoxin crystal protein. This protein was included in the scope of the invention as a comparison to the delta-endotoxins of the invention. Some of the delta-endotoxin oclain sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression casesttes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for generating altered or improved delta-endotoxin or nucleic acids in products or
                                                                                                                                                                                                 isolated delta-endotoxin and delta-endotoxin-associated nucleic acids polypeptides, useful for killing lepidopteran or coleopteran pests or producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               186

                               A plasmid contg. the gene is isolated by forming a gene library from plasmid DNA of B.thuringiensis israelensis (HD 522 strain, USA Goldberg ONRGO) followed by screening with anti-israelensis insecticidal protein IG. The insecticidal protein is highly effective against Diptera, esp. Aedes. See also AAP81034. (Updated on 24-OCT-2003 to standardise OS

PS71M3 [from B.t. PS71M3-69 (NRRL B-18515)]. It is related to the cryIVA toxins, the 140 kD endotoxin and the type II toxin from B.t. var. israelensis. The protein has a mol. wt. of 130 kD. Microorganisms transformed with the DNA may be administered to dipteran insects or their environments, the expressed toxins acting as an insecticide. See also

                                                                                                          9
                                                                                                                                                                                                                                                                           A library was constructed from Bacillus thuringiensis PS71M3 total cellular DNA in lambda Gem-11. Plasmid pMYC1625, selected in Bscherichia coli, contained a 8.0 kb insert expressing a beta-endotoxin gene. This was sequenced (AAQ81178). A cured, acrystalliferous B.t. host carrying pMYC1625 produced a 130 kba crystal protein (AAR63078) toxic to calliphorids. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated delta-endotoxin nucleic acid molecules, cry26Aal and cry28Aal isolated from Bacillus thuringiensis finitimus, that encode a toxin that is active against insects. The invention is useful for producing an insect-resistant plant, by introducing the nucleic acid molecule into the plant, where the nucleic acid is expressible in the plant in an effective amount to control an insect. The invention is useful for producing a toxin that is active against insects by obtaining the transgenic host cell and expressing the nucleic acid molecule in the host cell, which results in the toxin that is active against insects. The toxin is useful for controlling an insect by ability of insect pest to survive, grow or reproduce, for inhibiting the ability of insect pest to survive, grow or reproduce, for limiting insect related damage or loss in crop plants, and to prophylactically treat insect susceptible areas or plants to confer protection or resistance against harmful insects. The present sequence is Bacillus thuringiensis

The sequences for the delta-endotoxin polypeptides are also disclosed. The invention provides methods for producing the toxins and compositions containing the toxins. The methods and sequences of the invention are useful for controlling insect pests in transgenic plants confer insect resistance. The present sequence represents the cry28Aal delta-endotoxin of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated nucleic acid molecule encoding a toxin that is active against insects useful for controlling insect pests or for conferring insect resistance in plants.
                                                                                                                                                                                                                                                                                                                                                                                  Bacillus thuringiensis serovar finitimus cry28Aa1 delta-endotoxin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the isolation of novel cry26Aa1 and cry26Aa1 delta-endotoxin genes from Bacillus thuringiensis ssp. finitimus. The sequences for the delta-endotoxin polypeptides are also disclosed. The invention provides methods for producing the toxins and compositions containing the toxins. The methods and sequences of the invention are useful for controlling insect pests in transgenic plants confer insect resistance. The present sequence represents the cry28Aa1 delta-endotoxin of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AGTGCTGATACAATTGCTGCAGTTAGTGCAGGTACTATTGTATCCGGTACTCTGTTAGCC

A library was constructed from Bacillus thuringlensis PS71M3 total cellular DNA in lambda Gem-11. Plasmid pMYC1636, selected in Escherichia coli, contained a 15 kb insert expressing a beta-endotoxin gene. This was sequenced (AAQ81180). A cured, acrystalliferous B.t. host carrying pMYC1636 produced a 77 kba crystall protein (AAR63079). (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        133 TACAAAGAGTGGCTCAATATGTGTCAAGGGAATACACAATATGGTGATAATTTCGAGACA 192

                                                                                                                          The sequence was deduced from the DNA sequence obtd. from plasmid pMYCL636 which was isolated from a genomic library prepd. from DNA from B.t. PS71M3-69 (NRRL B-18515)]. It is related to the crylVC toxins from B.t. var. israelensis. The protein has a mol. wt. of dipteran insects or their environ-ments, the expressed toxins acting as an insecticide. See also AAAI4373. (Updated on 25-MAR-2003 to correct PA field.) This sequence represents a delta-endotoxin crystal protein. This protein was included in the scope of the invention as a comparison to the delta-endotoxins of the invention. Some of the delta-endotoxin coding sequences of the invention aver alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their posticide resistance, specifically bacteria production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for generating altered or improved delta-endotoxin or delta-endotoxin are useful for senerating altered or improved delta-endotoxin or delta-endotoxin-associated proteins that have
                                                                                                                                                                                                                                                                                                                                    New isolated delta-endotoxin and delta-endotoxin-associated nucleic acids and polypeptides, useful for killing lepidopteran or coleopteran pests or for producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            73 ATTGATCATTCTAGATACCCTTACACAAATAATCCAAATCAACCATTACAAAACACAAAT 132
